Mailing Lists

by Robin Green, Nicola Ken Barozzi

1. Important Notices

Before posting a question or problem to any mailing list, please first look at the following resources:

- Forrest FAQs
- Forrest documentation
- Cocoon Links for pointers to general XML and XSL and Java related resources. Please do not ask such questions here unless they are related to Forrest.
- Mailing list archives - a veritable goldmine of Forrest-specific information.

If you are posting about a problem that you are having, it will aid in finding a speedy resolution if you provide full configuration details, including the version number, your operating system, JDK version, and servlet engine, and full details of any errors encountered including full error messages and stack traces.

2. Forrest Dev

Purpose: Any issue related to Forrest. For both developers and users. When the list gets too big we may start a -users list.

Note: This is a subscriber-only list (in an effort to stop spam), so you must join before you can post.

Subscribe: `forrest-dev-subscribe<at>xml.apache.org`

Un-subscribe: `forrest-dev-unsubscribe<at>xml.apache.org`

Help: `forrest-dev-help<at>xml.apache.org`

Read-only NNTP access to forrest-dev is available through the gmane.text.xml.forrest.devel newsgroup

Note: If sending code patches, then please add PATCH to the subject line and use `diff -u` format.

3. Forrest CVS

Purpose: Receive notifications on changes in the Forrest codebase in CVS. Note that these cvs log messages are also automatically sent to the forrest-dev mailing list.

Subscribe: `forrest-cvs-subscribe<at>xml.apache.org`

Un-subscribe: `forrest-cvs-unsubscribe<at>xml.apache.org`

Help: `forrest-cvs-help<at>xml.apache.org`
